

A revolution in bird control

Birds annually cause billions of euros in damage. Spikes and netting are effective but highly expensive and at the expense of the aesthetics of a building. Many alternatives are animal unfriendly, inefficient on the long term or a cause of nuisance for the environment. The innovative Agrilaser technology has proven to be a sustainable solution to bird nuisance.

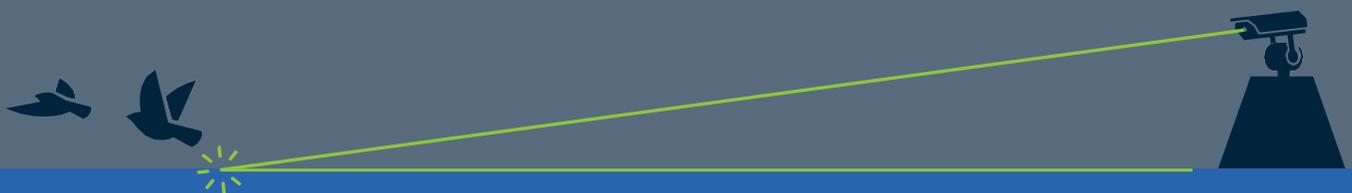

How does Agrilaser® work?

All Agrilaser products are equipped with highly precise laser optics, which produce a constant laser beam in order to project a bright green laser spot. The moving spot is perceived by the birds as a physical object. When approaching birds, they fly away because they want to avoid being hit.

During dusk and dawn the laser beam becomes visible because dust and fog particles in the air are being lit by the

laser beam. During these circumstances birds perceive the entire beam as a stick. Over the entire length of the beam birds can be repelled by making swiping movements over the surface.

Depending on the output power of the laser source Agrilaser bird control products have a long range varying in different light and atmospheric conditions.

The benefits of Agrilaser®

Long range up to 2,500 meters

Agrilaser enables effective bird repelling across long distances.

More animal and environmentally friendly

The Agrilaser Autonomic is a clean and silent solution.

Long-term effectiveness

Agrilaser maintains its repelling effect over time.

The ultimate laser beam

The best laser components and high precision optics ensure the highest standards in quality and accuracy.

For which bird species is Agrilaser® effective?

Most birds respond immediately to the Agrilaser. The products are effectively used in order to reduce nuisance of:

Gulls

Crows

Pigeons

Ducks

Geese

Starlings

Swifts

Hérons

Integral approach

Bird Control Group contributes to keeping birds at a safe distance from commercial activities, not by battling bird presence and symptoms, but by helping companies to integrate their activities in a natural environment.

The integral bird control strategy always consists of 3 main activities:

- 1 Continuous monitoring and analyzing of data**
- 2 Alteration of habitat and automated bird repelling**
- 3 Direct interception by bird controllers**

The products and services of Bird Control Group fit this strategy. They help to systematically improve the situation and to prevent bird nuisance for the long term.

The Agrilaser® Handheldseries

No other reactive bird repelling device offers as much control over birds as the Agrilaser Handheld. It enables bird controllers to repel birds in a controlled direction. The high-powered Agrilaser Handheld models can be used even during bright light conditions. To increase accuracy the lasers are equipped with sights.

The highly precise laser optics create a laser beam with such a low divergence value that no other handheld laser in the world can match the qualifications of Agrilaser.

Agrilaser Handheld: The ultimate solution to bird nuisance

Agrilaser Lite: The compact solution to bird nuisance

The Agrilaser® Autonomic

The Agrilaser Autonomic is a fully automated bird repelling system, to keep areas free of birds during day and night. The system provides continuous bird repelling capability after one-time configuration.

The Agrilaser Autonomic comes with intuitive software that makes configuration an easy task. The flexible nature of the Agrilaser Autonomic allows configuration of up to 3 time slots and 16 different zones, enabling bird repelling capability at the periods and places of your choice.

The Agrilaser Autonomic is powered by AC power by default. Where grid power is not available the system can be equipped with an additional solar charging system.

Guaranteed performance

To ensure operation in the field with minimal maintenance every component of an Agrilaser product is carefully selected to meet high-grade industrial quality standards. To guarantee a long-term use of the products we advise to service them periodically.

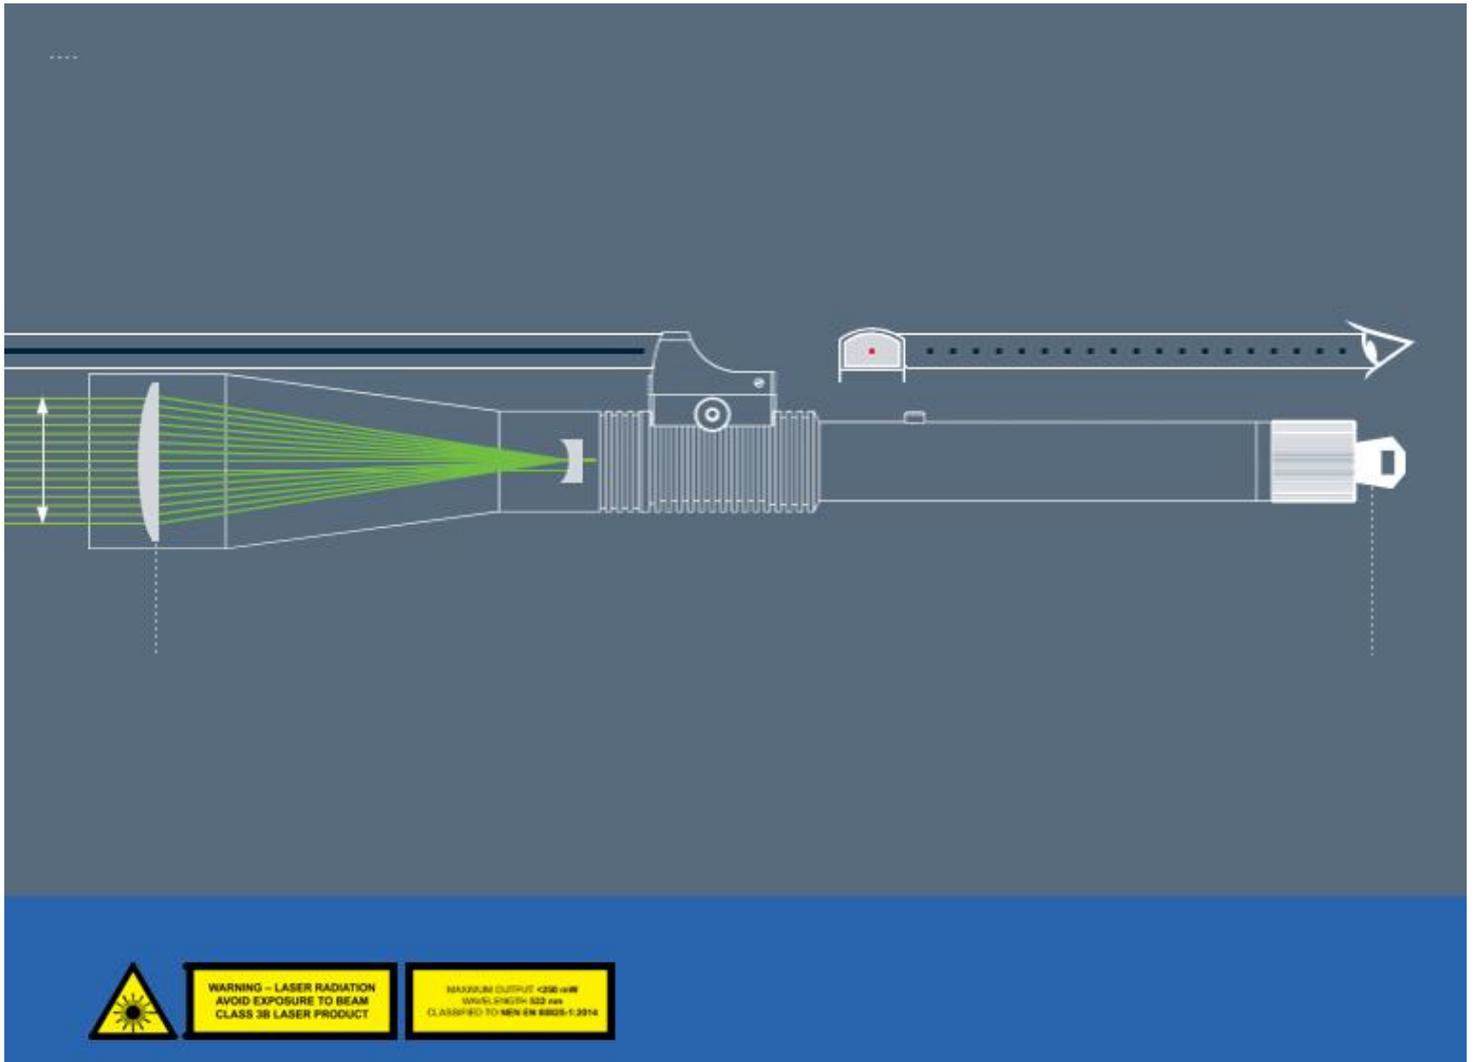

Should any defect arise as a result of production faults, free repair or replacement is guaranteed. The Agrilaser products have a warranty period of 12 months, starting on the date of purchase. In case of replacement, the warranty period of the original product will remain valid.

Is Agrilaser® safe to apply?

Yes, all Agrilaser products can be applied safely as long as the safety instructions are maintained. Safety has always been an absolute precondition at Bird Control Group. Therefore we are continuously working on making the products safer. All of our products comply with the highest safety standards for laser equipment.

Instruction and training

The safety of any product depends on the person operating the laser. That's why Agrilaser products come with extensive information on how to use the product to most effect without risk. Additional training is offered for situations that require personnel to operate the products in safety-critical situations.
